DISTRESS TRANSFERS OF FARM REAL ESTATE

Number of properties and acreage acquired,
by designated types of buyers, by years

This report presents State summaries of basic data from selected counties, giving the total volume of farm real estate acquired by various types of buyers through distress transfers during the 15-year period following 1921, for 40 States. Data for shorter periods are presented for 7 States.

The data for this report, except as indicated by footnote, were obtained in a nation-wide Works Progress Administration Project for the collection and tabulation of data from official county records concerning farm mortgages, farm real estate transfers, and taxes. This project was conducted during 1936 and 1937 under the joint sponsorship of the Works Progress Administration and the Bureau of Agricultural Economics. 1/

The Agricultural Experiment Stations of 44 States cooperated with the Bureau of Agricultural Economics and the Works Progress Administration in supervising the collection of the data in their States. The field organization engaged in collecting the data consisted of county crews working in approximately 1,000 counties, or about one-third of all the counties in the United States, with local, State, and regional supervision. The major part of the field supervision and tabulation work was handled by the project headquarters in Chicago, Illinois.

In the land transfer portion of the project, information was obtained from the official recordings of deeds and contracts in approximately two-thirds of the counties in which the project was conducted. Acceptable records on land transfers were obtained in approximately 500 counties. The counties for which data are presented in this report were selected on the basis of adequacy, accuracy and completeness of the data for the selected periods.

1/ In the Bureau of Agricultural Economics, this project was under the direction of Eric Englund, Assistant Chief of the Bureau, and was directly administered by a committee under the chairmanship of Donald Jackson. The work involved in compiling the data for this publication "Distress Transfers of Farm Real Estate" has been carried out by the Bureau of Agricultural Economics under the direction of M. M. Regan and A. R. Johnson.

This report includes only those transfers of farm land which were judged to have resulted from mortgage foreclosure, assignment to creditor, sale in bankruptcy, or other methods arising from difficulty in meeting payments on indebtedness. Sales for taxes have not been included. In separating assignments from bona fide sales, transfers to mortgagees were classed as assignments.

The data refer only to properties used principally for agricultural purposes. Parcels of less than three acres, platted properties or lands lying within the limits of incorporated places were considered as non-farm properties and have been excluded.

Compilations of data on transfers of farm real estate by kind of transfer and on voluntary transfers by designated types of sellers are in preparation. Other expected releases will relate to average consideration in bona fide sales, and ratio of assessed value to consideration. In connection with the farm mortgage portion of the project, individual State reports are being released giving annual data on percentage distribution of total recordings, average interest rates, and average consideration.

Distress transfers of farm real estate in selected counties: Number of properties and acreage acquired, by designated types of buyers, by years
